

Boil Water Notice for San Augustine Texas
02/16/2021

Due to a loss of system pressure, the Texas Commission on Environmental Quality has required the City of San Augustine Texas public water system (PWS ID 2030001) to notify all customers to boil their water prior to consumption (e.g., washing hands/face, brushing teeth, drinking, etc). Children, seniors, and persons with weakened immune systems are particularly vulnerable to harmful bacteria, and all customers should follow these directions.

To ensure destruction of all harmful bacteria and other microbes, water for drinking, cooking, and ice making should be boiled and cooled prior to use for drinking water or human consumption purposes. The water should be brought to a vigorous rolling boil and then boiled for two minutes.

In lieu of boiling, individuals may purchase bottled water or obtain water from some other suitable source for drinking water or human consumption purposes.

When it is no longer necessary to boil the water, the public water system officials will notify customers that the water is safe for drinking water or human consumption purposes.

Once the boil water notice is no longer in effect, the public water system will issue a notice to customers that rescinds the boil water notice in a manner similar to this notice.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

If you have questions concerning this matter, you may contact Chris Anding (Superintendent) at City of San Augustine by phone to 936-275-2121 or by email at info@cityofsanaugustinetx.gov.

This is a precautionary boil notice since the major weather event we have just undergone caused us to run out of water, and loose water pressure in parts of town. Although the issue has been resolved in the water plant, we still have numerous leaks that we won't be able to repair immediately since additional weather is moving into the area as this is being written. To help avoid more shortages please conserve water as much as possible.

Thank you.
